

How to Play Food Flip

- Shuffle the cards and deal between the players with cards facing down (max 6 players)
- Players should look at their top card but keep it hidden from other players
- Player 1 (youngest player) picks a category from their top card (energy, total fat, saturated fat, sugar, salt) and reads out its value
- Player 2 reads out the value of the same category from their top card (you cannot look through the pile for a different card)
- The player with the lowest value wins the round and takes both cards and places them at the bottom of their pile.
- The player who won the round then gets to pick any category from the new card at the top of their pile.
- If there is a draw (the cards have the same value), place the cards in between the two players. The winner of the next round gets to take all 4 cards (including the ones in the middle)
- The winner of the game is the one with all the cards in the pack.

Traffic Light Label

To let us know if a food or drink has high, medium or low amounts of fat, saturated fat, sugars and salt, many products have a front of pack colour-coded nutrition label - or 'traffic light label' because they use the same colours as traffic lights that we see on the roads.

Energy	Fat	Saturates	Sugar	Salt
21%	17.1g	7.7g	4.2g	0.8g

Red means high
Amber means medium
Green means low

A product with lots of red labels is less healthy and so we should try to have these food and drinks less often.
A product with more green labels is healthier and so we should feel free to have these food and drinks more often.
Have a look in your cupboards at home. How many products have traffic light labels?
If you find a product without a traffic light label, you can use the table below to make one!

Nutrient	LOW	MEDIUM	HIGH
Fat	≤ 3.0g/100g	> 3.0g to ≤ 17.5g/100g	> 17.5g/100g
Saturates	≤ 1.5g/100g	> 1.5g to ≤ 5.0g/100g	> 5.0g/100g
Sugar	≤ 5.0g/100g	> 5.0g to ≤ 22.5g/100g	> 22.5g/100g
Salt	≤ 0.3g/100g	> 0.3g to ≤ 1.5g/100g	> 1.5g/100g
